

TECH FLURRY'S G-One

Team:-

Ansh Sinha

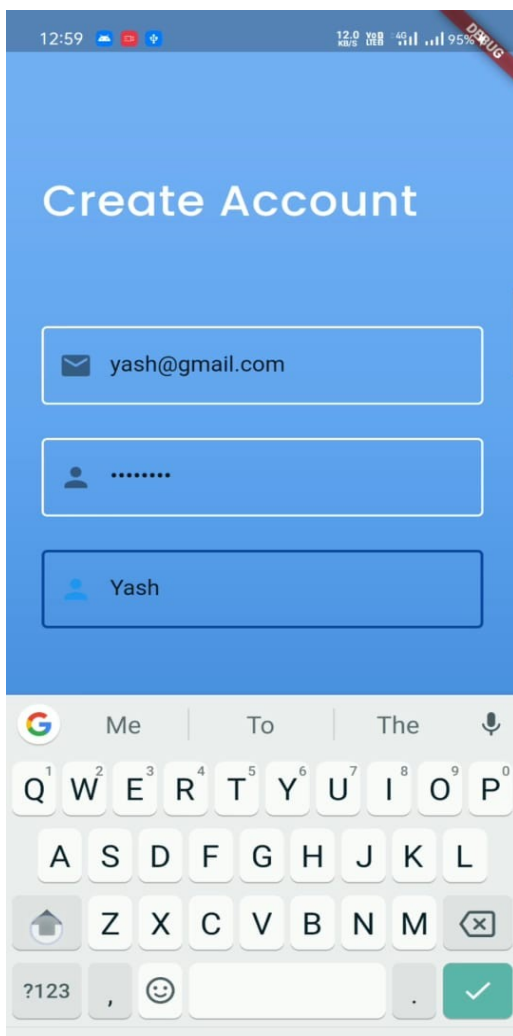

Aman Kansal

Archit Mittal

Mani Garg

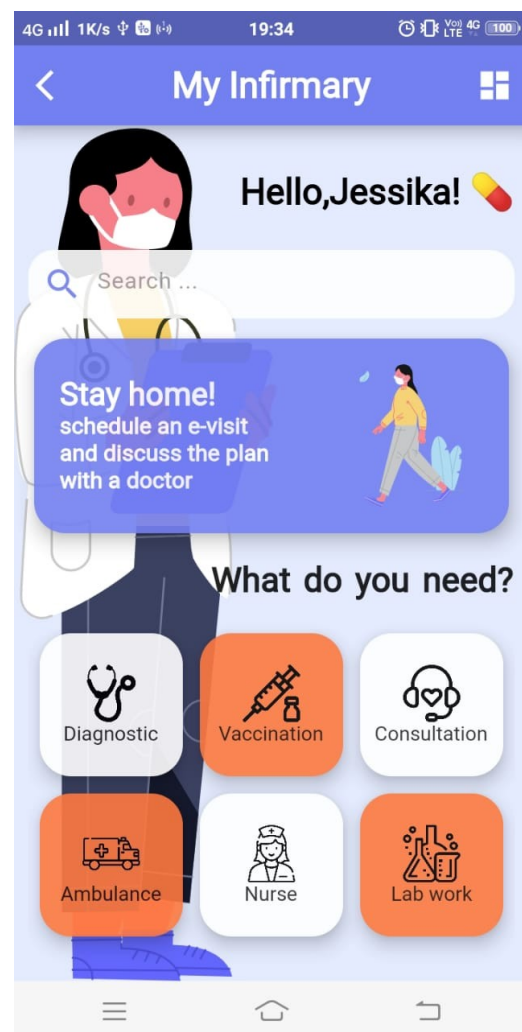

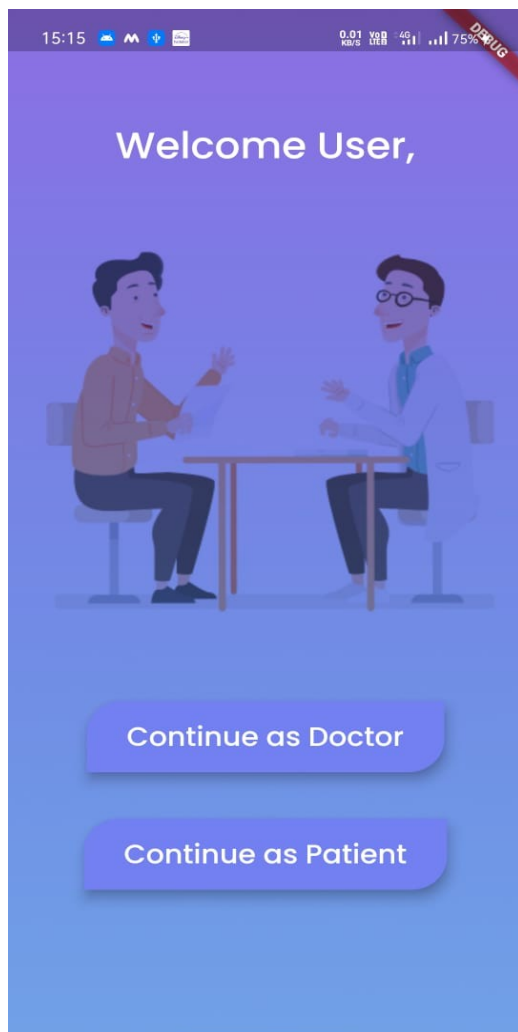

Anandita Bajpai

This is the document that describes what our project(G-one) is about explaining all with screenshots.

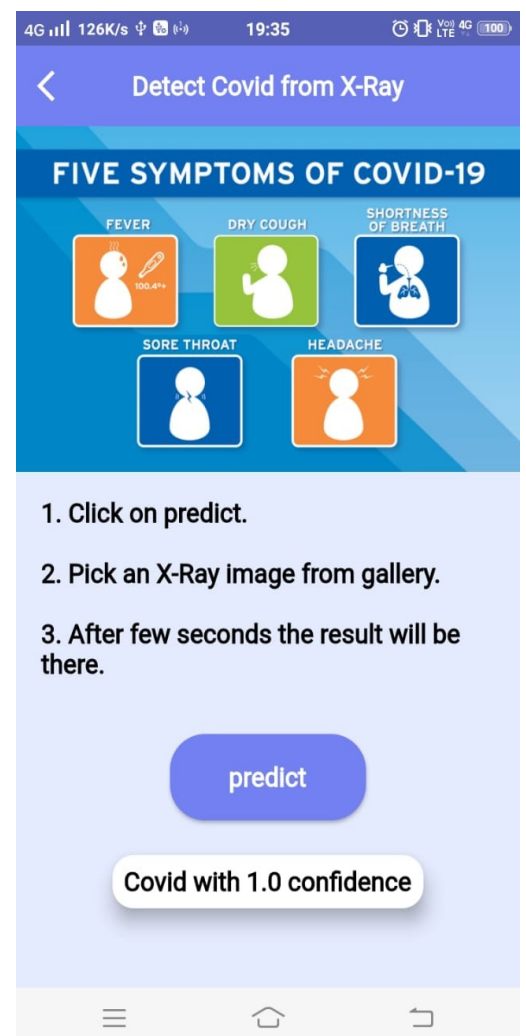

First create account so that you
can login in app

This is the login page where Doctor as well as patient can login with there respective credentials that they have used while creating account.

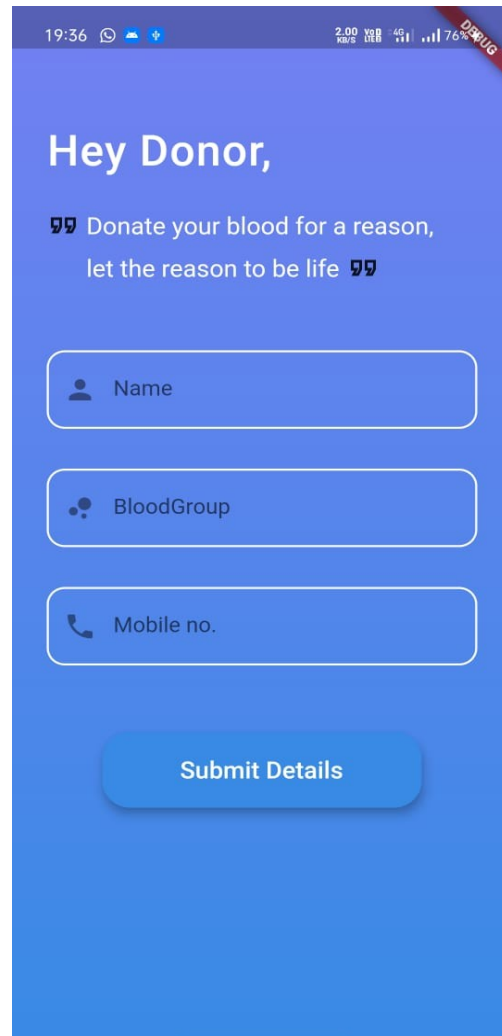

Then logging in account Dashboard is opened with various facilities on it

There is an option of full health check up

After this we also have a facility for patients where they can upload there image of x-ray and can detect if they are corona positive or not .We also have many models like this for various detection

We also have blood donation facility in this app which helps a person to donate as well as to contact someone if they need blood.

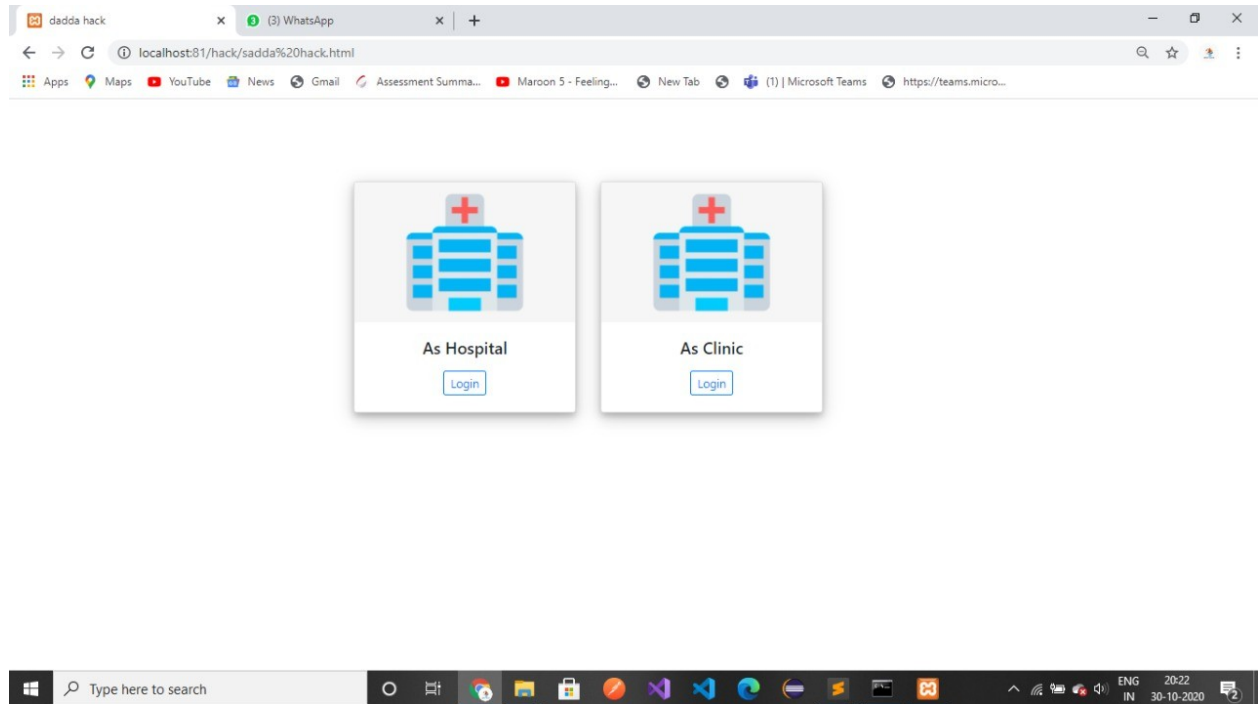

The screenshot shows a mobile application interface with a blue gradient background. At the top, there is a status bar with the time 19:36, signal strength, and battery level. Below the status bar, the text "Hey Donor," is displayed in white. Underneath, there is a quote: "Donate your blood for a reason, let the reason to be life". Below the quote, there are three input fields with white borders and blue icons: "Name" (person icon), "BloodGroup" (blood drop icon), and "Mobile no." (phone icon). At the bottom, there is a blue button with the text "Submit Details".

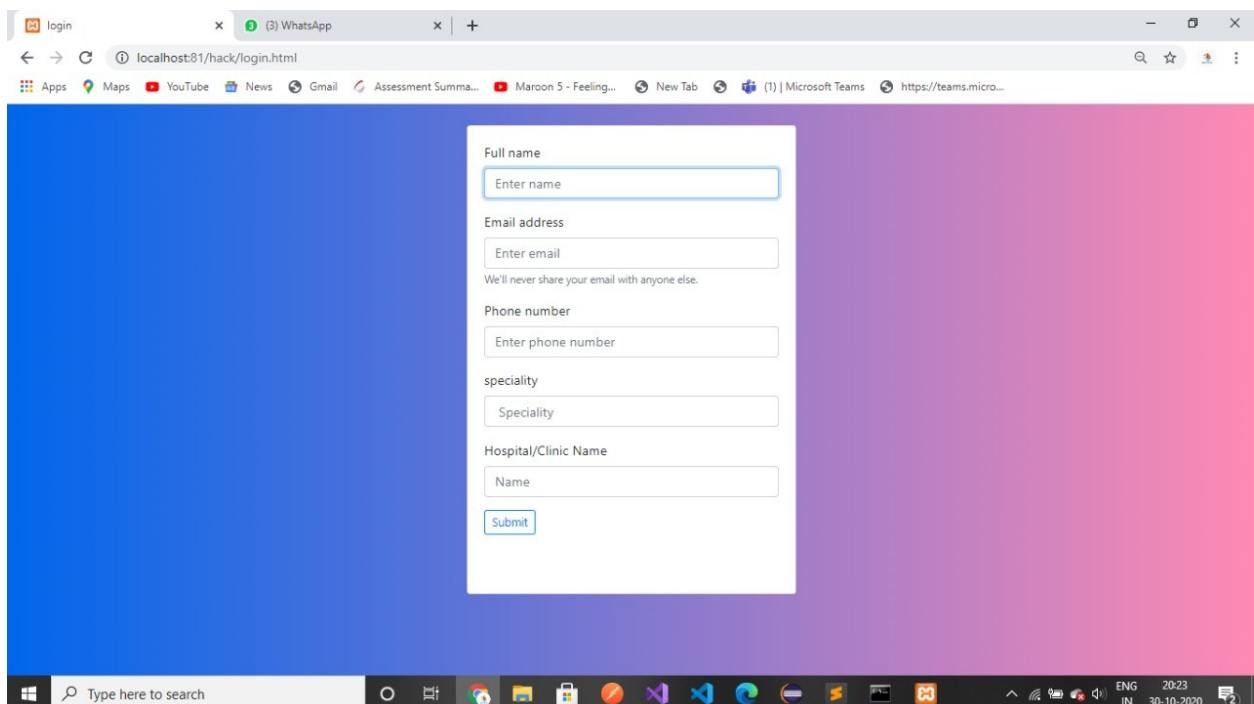

Our project is not only confined to android but it is extended to website also
Once patient book an appointment in a hospital that appointment is visible to Doctor.

In Website

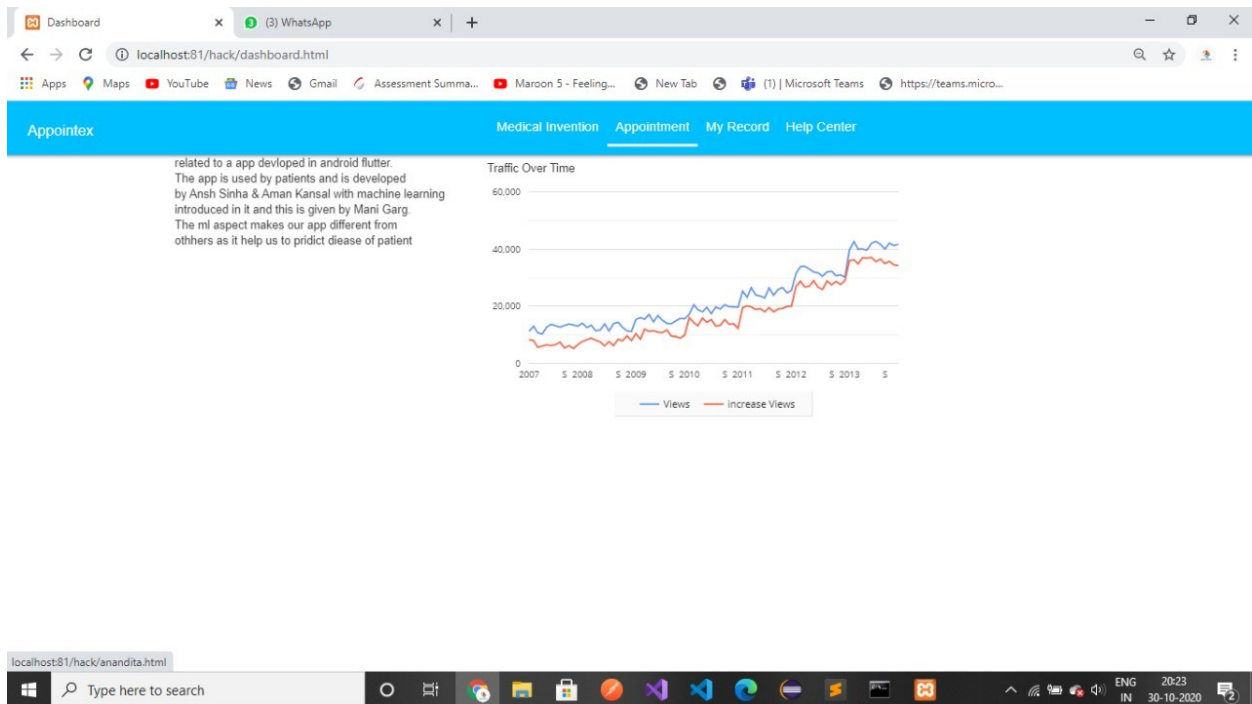

Doctor has to login if he is a Doctor in hospital or clinic

then fill the form with login credentials used in app.

Then choose appointment in navigation bar

and doctors can see appointments of the day thai he has.
